

2019 Grow Native!

Resource Guide

to suppliers of native plant products and services

Missouri Prairie Foundation®
www.grownative.org

Keeping Nature Near®

Choose native plants for

- landscaping
- farms, forage, and food
- water protection
- pollinator and wildlife habitat

Add beauty and enhance quality of life

Help sustain monarchs with nectar plants and milkweeds

Provide for pollinators

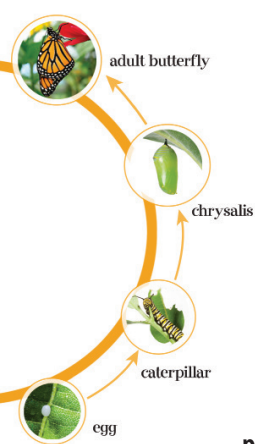

Create habitat for wildlife

Manage stormwater

Plant edibles for people

Put Native Plants to Work

Native plants beautify landscapes, support the natural food web, manage stormwater, provide for pollinators, offer drought-tolerant livestock forage, and improve soil health.

Grow Native!s **Monarch Café** food for Monarchs

program features the 8 best native species of milkweed—as recommended by Monarch Watch—in the lower Midwest for monarch butterfly caterpillars (larvae).

Nectar of milkweeds attracts many butterflies and other insects.

Adult monarch butterflies lay their eggs on milkweeds, and when the caterpillars hatch, they eat the leaves and other plant parts.

Look for Grow Native! tags when you shop for plants.

Grow Native!s

Pollinator Buffet Supporting the Food web

program features 10 of the many flowering plants native to the lower Midwest that provide nectar and/or pollen for pollinating insects.

Native bees, honeybees, butterflies, moths, and other insects pollinate the vast majority of flowering plants and one-third of our food crops. The landscape-worthy natives featured in the Pollinator Buffet series are among many flowering plants that will help you provide nectar and pollen from early spring through late fall for pollinators.

A black and yellow bumble bee pollinating tomato flowers and wild bergamot.

Insects are vital pollinators of many of our food crops. Tomato flowers, for example, are pollinated by bumble bees—no bumble bees, no tomatoes! Native plants provide additional food sources for pollinators, which is especially important when fruit and vegetable flowers are not in bloom.

Create a **Bird Bistro** with native plants, shrubs, and trees to nourish insects that songbirds need to thrive—and beautify your landscape!

Our beloved birds—like cardinals, chickadees, orioles, bluebirds, and so many more—must feed their babies insects and other invertebrates. For example, to raise one nest of chickadee babies, parents must forage up to 9,000 caterpillars to feed them (Brewer 1961*). Native trees, shrubs, and other plants provide food for insects that baby birds need, and supply adult birds with fat- and protein-rich seeds and berries to eat, as well as nesting habitat.

NUMBERS OF SPECIES OF BUTTERFLY AND MOTH CATERPILLARS SUPPORTED BY NATIVE AND NON-NATIVE PLANTS

Native Oaks
500+

Native Cherries & Plums
429

Native Asters
105

Non-native Boxwood, Forsythia, & Butterfly Bush

1

Non-native Daylilies, Hostas, & Lilyturf (Monkey Grass)

The Right Plant in the Right Place

Try these natives for shade, sun, and wet conditions.

Try the searchable
Native Plant Database at
grownative.org to create lists of native plants
for specific purposes. Here are some ideas
to get you started!

Ground covers

These natives work well as spreading ground covers, in light to medium shade and dry to average soils. Other native ground covers to try—all under 6 inches—are wild ginger (*Asarum canadense*), cedar sedge (*Carex eburnea*), barren strawberry (*Waldsteinia fragarioides*), and prairie pussytoes (*Antennaria neglecta*).

narrow-leaved spleenwort
(*Diplazium pycnocarpon*)

dwarf crested iris
(*Iris cristata*)

round-leaved ragwort
(*Packera obovata*)

James' sedge
(*Carex jamesii*)

Robin's plantain
(*Erigeron pulchellus*)

golden groundsel
(*Packera aurea*)

Full Sun

Create a vibrant summer display with these natives that do well in full sun. Other landscape-worthy, top-performing natives for full sun include blue wild indigo (*Baptisia australis*), Texas green eyes (*Berlandiera texana*), blazing stars (*Liatris* sp.), prairie dropseed grass (*Sporobolus heterolepis*), little bluestem (*Schizachyrium scoparium*), butterfly milkweed (*Asclepias tuberosa*), New England aster (*Symphotricum novae-angliae*), and purple prairie clover (*Dalea purpurea*).

Purple coneflower
(*Echinacea purpurea*)
(also grows well in part shade)

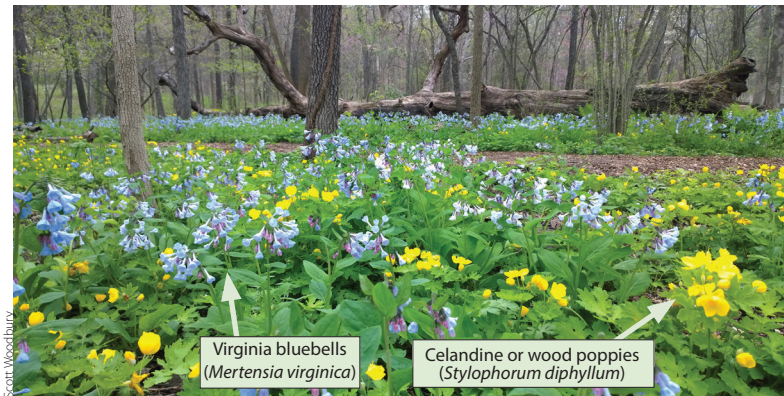

False sunflower
(*Heliopsis helianthoides*)

Royal catchfly
(*Silene regia*)

Wild bergamot
(*Monarda fistulosa*)

Shade

These spring wildflowers create a carpet of blooms in shady areas. Some of the many other natives for shade or part shade are American spikenard (*Aralia racemosa*), American beakgrass (*Diarrhena obovata*), Pennsylvania sedge (*Carex pensylvanica*), oak sedge (*Carex albicans*), and alumroots (*Heuchera* sp.).

Virginia bluebells
(*Mertensia virginica*)

Celandine or wood poppies
(*Stylophorum diphyllum*)

Aquatics

Use natives for ponds and water features, which add beauty and help support amphibians. Emergent vegetation serves as perching places for aquatic insects, which in turn provide food for frogs. In addition to these native aquatics, also try southern blue flag (*Iris virginica*), copper iris (*Iris fulva*), water canna (*Thalia dealbata*), and water plantain (*Alisma trivale*).

Pickerel weed
(*Pontederia cordata*)

Arrowhead or duck potato
(*Sagittaria latifolia*)

Invasive bush honeysuckle
(*Lonicera mackii*)

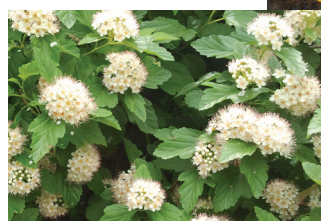

Native Alternatives to Invasive Honeysuckle & Pear

Native alternatives to highly invasive bush honeysuckle and Bradford/Callery pear include those at right as well as possumhaw (*Ilex decidua*), native viburnums (*Virburnum* sp.), and roughleaf dogwood (*Cornus drummondii*). Not only do these natives provide privacy, they also increase the biodiversity and beauty of your property.

Invasive Callery/Bradford pear
(*Pyrus calleryana*)

Native ninebark (*Physocarpus opulifolius*), right, and vernal witchhazel
(*Hamamelis vernalis*), far right

Find more information on invasive plant identification and control at Molnatives.org, a resource provided by Grow Native's Missouri Invasive Plant Task Force (MoIP).

Natives for Healthy Forage, Stormwater Management, and Erosion Control

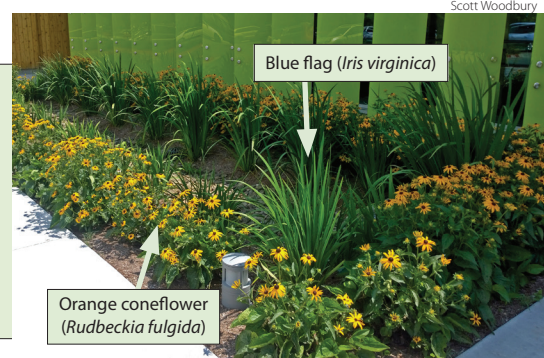

Planting strips of prairie plants within row crop agriculture—even if only 10% of the area—dramatically improves water quality and habitat for pollinators and birds.

Native prairie plants provide nutritious, healthy forage for livestock that is drought-tolerant and also create habitat for grassland birds and other wildlife.

Use natives to absorb rainwater runoff from rooftops, parking lots, and other impervious surfaces. Directing water into the ground conserves the Earth's freshwater resources and protects streams and property from flooding. Native plants used in rain gardens and bioswales also provide habitat for pollinators, birds, and more. Natives to try for rain gardens or saturated soils include those pictured here as well as palm sedge (*Carex muskingumensis*), rose mallow (*Hibiscus lasiocarpus*), cardinal flower (*Lobelia cardinalis*), button bush (*Cephalanthus occidentalis*), and many others.

The following directory provides product, service, and contact information for professional members of the Grow Native! program.

Definitions of Native Plant Products and Services

Seeds: Seeds of native plants for landscaping, forage, wildlife habitat, and other purposes

Plugs: Plants, ready for planting, growing in small cells of various sizes

Plants: Potted plants, ready for planting, growing in small to large containers; may be nursery inventory or custom grown

Shrubs & Trees: Woody plants ready to be planted—bare-root seedlings, trees, or shrubs in pots, or larger trees and shrubs dug from field production

Land Care & Landscape Services: Planting, establishment, and/or care of landscapes for homes, businesses, public places, and other small areas

Landscape Architects: Individuals who are licensed and accredited by state governments to plan landscapes in outdoor public areas, landmarks, and gardens of various sizes

Landscape Designers: Individuals who plan landscapes, usually residential and commercial gardens

Arborists: Individuals who plant, care for, and maintain individual or small numbers of trees

Forest Management: Evaluates forests and timber stands, creates management plans, and sometimes implements management plans

Wildlife Habitat & Ecological Services: Provides resource management and/or maintenance, usually for larger tracts of land

Education: Provides native plant specialists for educational events, organizes seminars/workshops, owns/maintains places to see native plants in gardens, restorations, and natural areas, and/or provides educational materials

Institutional Supporter: An institution that supports the promotion of native plants, such as a botanical institution, a non-profit organization, a business, an educational institution, or a community

Related Products & Services: Products and services related to native plants and their uses, including erosion control, stormwater management, revegetation products, and compost

The Missouri Prairie Foundation and its Grow Native! program provide the Grow Native! Resource Guide as a convenience to gardeners, landowners, and landscape professionals and enthusiasts. It is the responsibility of the consumer to check the references of, negotiate fees with, and make all arrangements with those listed in this Resource Guide. The Missouri Prairie Foundation and its Grow Native! program accept no responsibility for products and services rendered.

Grow Native! recognizes and thanks its members and sponsors for their support in 2019, with particular gratitude to the Grow Native! Champion sponsor:

And the Grow Native! Platinum sponsor:

Grow Native! is a native plant marketing and education program of the Missouri Prairie Foundation. Grow Native! helps protect and restore biodiversity by increasing conservation awareness of native plants and their effective use in urban, suburban, and rural developed landscapes. Through collaboration with our professional members, consumers, private industry, non-profit organizations, and government agencies, Grow Native! aims to significantly increase the demand for and supply of native plants in the lower Midwest—Missouri, southern Illinois, eastern Kansas, and northern Arkansas.

Questions? Call 888-843-6739 or write to grownative@moprairie.org.
